

Environmental Policy

KATKO Oy and all of its employees are committed, both individually and collectively, to adopt and promote environmental sustainability in all operations.

We do this by implementing and following not only the relevant legislation concerning environment but also by working according to the global environmental best practices, such as: ISO 9001 and 14001.

KATKO Oy also encourages all of its supply chain to go beyond legislation when it comes to sustainability and the environment. KATKO Oy monitors its ability to reach its ecological goals by bench marking, in order to improve its performance in the field. Furthermore, KATKO Oy requires the same level of commitment and seriousness from all of its partners across the world.

KATKO Oy:

- Complies with all codes, relevant legislation, government policies and standards of best practices for environmental management in accordance with ROHS and ISO 14001
- Minimizes the adverse environmental impacts of all activities through sustainable and environmentally friendly approach
- Makes efficient use of natural resources, including energy & raw materials
- Operates effective arrangements for the reduction, reuse, recycling, safe storage and disposal of waste
- Co-operates with clients and business partners to promote effective environmental practices to help support KATKO Oy's policy and to reduce pollution and carbon foot print
- Facilitates the effective implementation of any environmental policies and procedures by providing appropriate information, training and tools to achieve its environmental goals

To achieve the above, we commit seriously to the environment concern and develop realistic objectives and targets for the reduction of any adverse impacts. KATKO Oy reviews this policy and its objectives & results regularly.
